cURL Commands

By Venkatapathi Babu

cURL stands for *Client URL*. It is a command-line tool to send HTTP requests. It supports methods like: GET, POST, PUT, DELETE. It is useful for testing APIs and automating web interactions.

GET:
curl http://127.0.0.1:5000/api/message

POST:

```
curl -X POST http://127.0.0.1:5000/api/message -H "Content-Type:
application/json" -d "{\"message\": \"Hello Workshop!\"}"
```

PUT:

```
curl -X PUT http://127.0.0.1:5000/api/message -H "Content-Type:
application/json" -d "{\"message\": \"Updated message here\"}"
```

DELETE:

curl -X DELETE http://127.0.0.1:5000/api/message
